- *Accurately analyze application usage patterns*
- *Understand end user document sharing behaviors*
- *Rapidly audit all documents within your domain and their privileges*
- *Enforce corporate information-sharing policies*
- *Provide better support to end users*

Google Docs' fast, cost-effective collaboration features make critical business documents more accessible and portable than ever before – and is quickly becoming the reason why more and more organizations are migrating to the strategic productivity platform. However, Google Docs does come with its risks as IT managers suddenly find themselves as outsiders looking in on end user activity rather than being able to proactively manage it. This lack of visibility into the document creation and publishing process and lack of governance control puts data security and access controls into the hands of the users themselves; a scenario that hinders the value of their implementation. As a result, IT teams are struggling to:

- Keep confidential or sensitive content protected from unauthorized viewing;
- Define and enforce information-sharing policies;
- Understand user adoption and utilization of Google Docs; and
- Rapidly address end user inquiries and issues related to the application.

Aprigo delivers the capabilities IT Managers need to overcome these obstacles and optimize return on your Google Docs investment. Aprigo NINJA for Google Docs gives organizations greater control over their Google Docs solution, providing them with valuable insight into who is using the application and how. This information empowers IT managers with data they can use to more effectively govern how documents and other data are shared within and outside of the company.

Get More from Aprigo NINJA

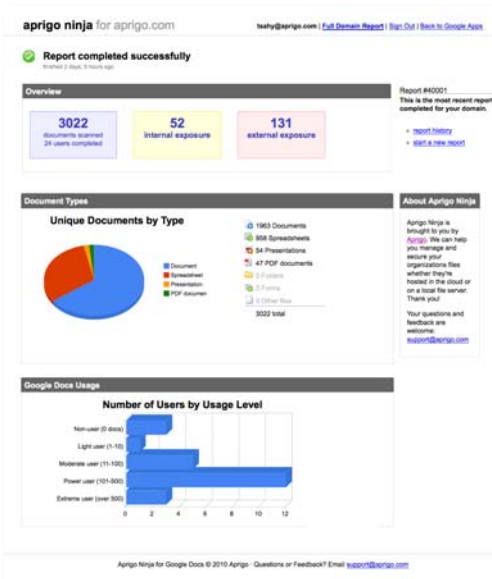

Rapid Set Up

Because it is a Google Marketplace application, adding Aprigo's NINJA for Google Docs to an organization's Google Apps is fast and easy. There is no need to install anything to the corporate domain. Simply follow the step-by-step wizard to gain

access to the service and configuration settings. All documents within your Google Docs environment can then be securely accessed instantly.

Insight into what documents exist and how they are shared empowers you to more effectively govern your company's content.

Powerful Document Intelligence

A user-friendly document browser enables NINJA for Google Docs users to generate complete lists of all their company's documents which are categorized by document name, owner, number of collaborators or the properties of each individual document i.e. sharing permissions. This provides greater visibility into the Google Docs environment for IT Managers so they can better control company content.

For example, documents owned or managed by former employees, outside contractors or other third-parties can be rapidly identified through a few simple steps.

This unhindered insight into the document landscape provides companies' IT support and help desk staff with the knowledge they need to effectively assist end users with questions, problem or issues.

Comprehensive Risk Management

Aprigo NINJA for Google Docs provides insight into document exposure at both the summary and granular levels. For example, IT managers can quickly discover documents containing sensitive or confidential data, including those that may be at risk, and verify files are only shared with authorized viewers.

If exposed content is identified, an email notice can be quickly sent to the end user that instructs them to modify permissions accordingly.

Simple Reporting and Statistics Tracking

Powerful, intuitive reports and statistics – including document classification and usage patterns – enable technology professionals to accurately track adoption rates and understand how users are leveraging the Google Docs platform. Companies can also efficiently audit documents, as well as their permissions, to ensure compliance with their information-sharing policies.

Advanced Security

Aprigo NINJA for Google Docs includes robust security features. Because it is a Google Marketplace solution, the process of granting privileges to access and use Aprigo NINJA is fully protected. IT Administrators can also immediately remove or disable the application at any time.

Aprigo NINJA is accessed over encrypted transport (https) so documents are retrieved using the secure published Google Docs APIs as well as encrypted transport. These overlapping security measures almost completely eliminate the threat of security breaches.

About Aprigo
